

Elegance meets convenience with our **swing arm openers.**

Synergy 525, 525L, 530L

The Synergy 525 series delivers raw power: It is designed for large and heavy swing gates, and ensures particularly effective power transmission. At the same time, these operators guarantee extremely quiet operation. The Marantec reference point technology ensures that the gate opens and closes with millimeter precision. While the Synergy 525 uses a piston that moves in and out when opening and closing, the Synergy 530 offers an alternative: Its carriage moves almost invisibly in the housing.
